

Comcast Business Recognized in 2023 Gartner® Magic Quadrant™ for Managed Network Services

PHILADELPHIA – DECEMBER 15, 2023 - Comcast Business today announced it has been recognized in the 2023 Gartner Magic Quadrant™ for Managed Network Services for the second consecutive year. This recognition reinforces the company's position as a leading global provider of secure network solutions.

The Gartner Magic Quadrant for Managed Network Services evaluates a service provider in the market based on their completeness of vision and ability to execute. Enterprises that use managed network services to balance cost optimization and service quality rely on the Gartner Magic Quadrant as a resource for informed vendor selection in the competitive managed network services market.

Additionally, Comcast Business performed well across all six use cases in the 2023 Critical Capabilities for Managed Network Services report, a companion to the Magic Quadrant that scores competing products and services against a set of meaningful differentiators.

“Comcast Business Managed Network Solutions provide secure, reliable connections for enterprises, catering to both corporate locations and remote employees,” said Bob Victor, Senior Vice President, Customer Solutions, Comcast Business. “We are honored to be acknowledged in Gartner's Magic Quadrant for the second year in a row. This recognition reflects our commitment to delivering secure networking solutions that empower enterprises worldwide to accelerate growth today and tomorrow.”

The report evaluates critical capabilities of providers based on use cases related to multicarrier WAN environments, MNS competency, MNS for LAN/WAN, secure network access, cloud, and remote work, as well as recent customer reviews. Such capabilities are critical for today's enterprises that need to support heavy cloud and remote work end users, complex WAN environments, and multiple connectivity providers. The Magic Quadrant for Managed Network Services considers both traditional enterprise networking as well as “transformational networking technologies” that will help enable enterprises to deliver on future business and end user needs.
